REQUISITE TECHNOLOGIES

REQUISITE TECHNOLOGIES · INTELLIGENCE, ENGINEERED

Intelligent systems for a complex world.

Technology is the enabler.
Your institution's intelligence is the advantage.

We build systems that help organisations see the whole picture and decide on evidence, and we help shape the organisation around them. For defence, government, banking and enterprise, inside your walls or fully offline.

- Delivered for the Indian Army
- Runs fully offline
- Evidence behind every answer
- People stay in command

WHAT WE DO

Every system sees a part. We build intelligent systems that see the whole, show their evidence, admit what they do not know, and leave people in command.

THE PROBLEM

Most organisations now have AI. Few can trust what it tells them.

Information is spread across dozens of systems, models answer with confidence they have not earned, and when something goes wrong nobody can show how the decision was made.

01

Nobody sees the whole.

Each system holds its own version of events. Dependencies stay hidden and warnings go unseen.

02

AI sounds sure when it isn't.

Models answer fluently from stale, partial or conflicting information, and rarely say so.

03

Decisions leave no trail.

Nobody can show what was known, what was assumed and who decided.

The answer isn't more AI. It's better systems around the people who decide.

HOW WE THINK · AI IS AN ENABLER, NOT THE DESTINATION

01

Examine

We look at how decisions are really made today: who decides, on what evidence, and where the picture breaks.

02

Construct

We build the systems, and shape the roles, rules and accountability around them, so technology fits how you work.

03

Renew

The world keeps changing, so neither the system nor the structure can stand still. We measure, learn and adjust with you.

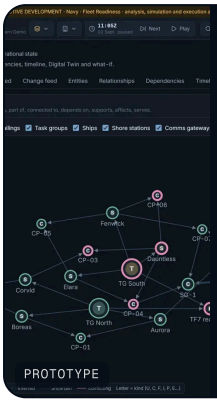

PROOF, NOT PROMISES

Indian Army	259 / 259	19	0
Recruitment delivered offline and on premises with RecruitOS, certified complete.	Reality Challenge cases passed by Kybern Prime. A naive baseline passed 74.	Working demonstration worlds, from fleet readiness to hospital capacity.	Internet connections needed in Sovereign mode. Your data never leaves.

PARTNER PROGRAMMES AWS · Microsoft · Google Cloud · NVIDIA · Databricks

Four products. One standard of evidence.

Each product does one job well, and all of them share the same rules: every answer shows its evidence, doubt is stated plainly, and everything can run inside your walls.

SYSTEMIC INTELLIGENCE

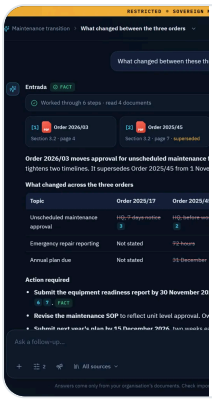

FLAGSHIP · PILOTS OPEN

Kybern Prime

See the whole picture of your organisation and decide with your eyes open.

- Reads the systems you already run as one connected world
- Every fact keeps its source; gaps and conflicts stay visible
- 259 of 259 Reality Challenge cases passed, scored in public

ENTRADA AI-IN-A-BOX · MERU M128

Private AI you unpack and switch on.

Entrada Knowledge AI installed on our own appliance. Unpack, connect to your network, start asking. No public AI service in the loop.

128 GB	GB10	4 TB	0
unified memory	NVIDIA Grace Blackwell	NVMe storage	internet needed

DEPLOYMENT

Your AI, on your terms.

Air-gapped	No network at all. Local models only.
On premises	Your data centre, your hardware, your rules.
Sovereign cloud	Government or in-country cloud, data kept at home.
Your cloud	Your AWS, Azure or Google Cloud account and keys.
Managed	We run it for you, with the same evidence trail.

HOW WE WORK

Technology and advice, from one team.

Decision Diagnostic START HERE · 2 TO 4 WEEKS
How a few key decisions are really made, and where the picture breaks.

Pilot
One real problem, 6 to 10 weeks

Deployment
Offline, on premises or cloud

Organisation design
Roles, decision rights, accountability

AI assurance
Test any AI on your own cases

Training
Operators, analysts and leaders

Support
Including offline sites

NEXT STEP

Start with one decision.

Bring us one real problem. We demonstrate, then run a bounded pilot inside your environment with the yardstick agreed up front, and you can stop if it does not earn its place.
